# A5: Relational Schema, validation and schema refinement

SegFault is a collaborative platform for programmers to learn, discuss different approaches, present ideas and share knowledge in a Q&A style. To this end, the following sections provide detailed insight into the project's relational schema, domains, functional dependencies and schema validation.

#### 1. Relational Schema

The Relational Schema includes the relation schemas, attributes, domains, primary keys, foreign keys and other integrity rules: UNIQUE, DEFAULT, NOT NULL, CHECK. Relation schemas are specified in the compact notation:

Relation	
reference	Relation Compact Notation
R01	Category( <b>ID</b> , name NN, description, numPosts NN CK numPosts >= 0)
R02	QuestionCategory(questionID $\rightarrow$ Question, categoryID $\rightarrow$ Category)
R03	Question(ID $\rightarrow$ Commentable, title NN, correctAnswer $\rightarrow$ Answer UK)
R04	$Answer(\mathbf{ID} \to Commentable, questionID \to Question NN)$
R05	$Commentable(\mathbf{ID} \to Message)$
R06	$Comment(ID \rightarrow Message, commentableID \rightarrow Commentable NN)$
R07	Message( <b>ID</b> , creationDate NN DF Today, score NN DF 0, numReports NN DF 0, isBanned NN DF False)
R08	$MessageContent(ID, content NN, messageID \rightarrow Message NN)$
R09	TimeStamp( <b>messageContentID</b> $\rightarrow$ MessageContent, userID $\rightarrow$ User NN, timeStamp NN DF Today)
R10	$Vote(\mathbf{messageID} \to Message, \mathbf{userID} \to User, positive NN)$
R11	User( <b>ID</b> , userName UK NN, email UK NN, passwordHash NN, bio, reputation NN)
R12	$Moderator(ID \rightarrow User)$
R13	Notification(ID, description NN, date NN, read NN, userID $\rightarrow$ User)
R14	CommentableNotification( $\mathbf{ID} \to \text{Notification}$ , commentableID $\to \text{Commentable NN}$ )
R15	$BadgeNotification(ID \rightarrow Notification, badgeID \rightarrow Badge NN)$
R16	$\begin{array}{l} \operatorname{BadgeAttainment}(\mathbf{userID} \rightarrow \operatorname{User},\mathbf{badgeID} \rightarrow \operatorname{Badge},\\ \operatorname{attainmentDate}\operatorname{NN}) \end{array}$

Relation reference	Relation Compact Notation
R17	Badge(ID, description NN)
R18	$ModeratorBadge(ID \rightarrow Badge)$
R19	$TrustedBadge(\mathbf{ID} \to Badge)$

### 2. Domains

The specification of additional domains can also be made in a compact form, using the notation:

Domain Name	Domain Specification	_
Today	DATE DEFAULT CURRENT_DAT	E

### 3. Functional Dependencies and schema validation

To validate the Relational Schema obtained from the Conceptual Model, all functional dependencies are identified and the normalization of all relation schemas is accomplished. Should it be necessary, in case the scheme is not in the Boyce–Codd Normal Form (BCNF), the relational schema is refined using normalization.
